

Good for pets. **Good for you.**

A solution tailored for you and your pets

We understand every pet owner has different needs. Therefore our Pet System focuses on finding the right mix of artificial grass product selection, installation technique and maintenance schedule tailored for your application. We work with you to determine just what you need and design your specific artificial grass pet solution.

Designed with your best friend in mind

Pets come in all shapes, sizes, and personalities. With this in mind, SYNLawn® developed the Pet System to be as unique as your pet.

Our installation methods and security options complete the total Pet System to provide you with the best solution for your specific application.

A healthy pet is a happy pet

Pets stay clean

No more dirty dogs or muddy paws. SYNLawN® keeps the dirt and mud away from your pets no matter what the weather is like outside. Even right after a rain, your pet is free to use the lawn without the worry they'll track the dirt back in the house.

Pets stay healthy

SYNLawn® synthetic grass is uninhabitable for ticks, fleas and other bugs keeping them far from your pets. Our Pet System creates an environment virtually free of pests and the diseases they carry. SYNLawN products provide extreme protection against micro-organisms that maybe harmful to your pets.

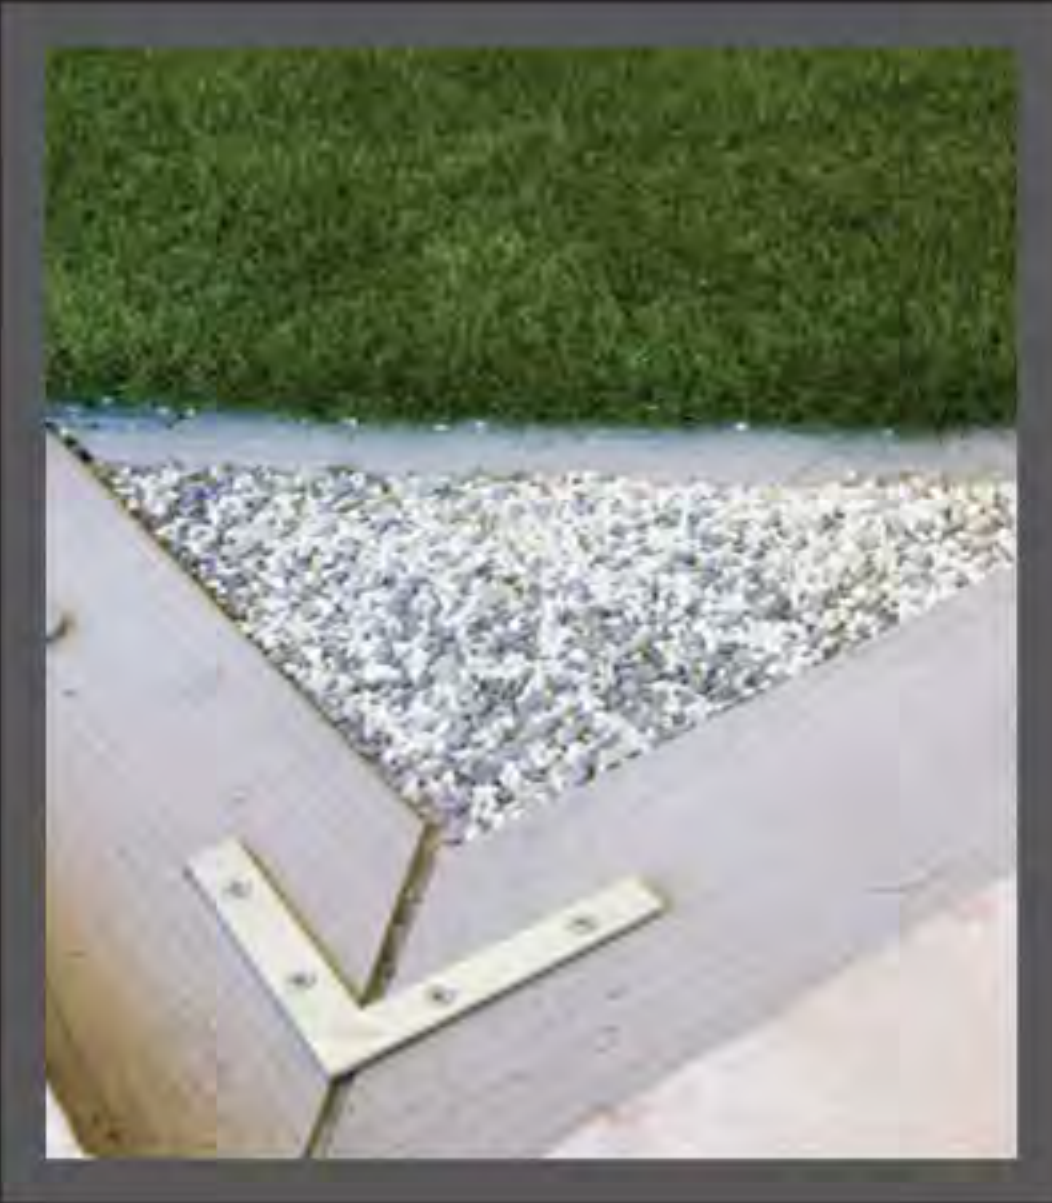

P E T S

Controls odors organically

Our Pet System utilizes organic zeolite crystals in the installation process to reduce or eliminate odors. Zeolite crystals are proven and widely used in many industries to reduce up to 80% of odors caused by the ammonia within pet waste.

Security package

Larger more active pets can often be destructive to natural grass yards. As an added measure, we have developed extra security methods for our grass to guard against heavy wear, running, pulling, digging, chewing and anything else your pets may dish out.

Rodent control package

Rodents such as moles, mice and gophers can be a big nuisance for any landscape. We control these varmints by installing a heavy-duty wire mesh under the base keeping your pets safe from most diseases and your landscape looking beautiful.

Green all over

SYNLawn® is green on top, in the middle and even underneath. Beyond the color, SYNLawn goes a long way toward environmental sustainability, taking measurable steps to be truly "green". Made in the USA, our biobased products are 100% recyclable, using renewable and recycled materials during the manufacturing process. Using SYNLawn can reduce your carbon footprint by conserving water, eliminating emissions from lawn equipment, and lowering the impact on landfills due to its long life expectancy.

SYNLawn's exclusive EnviroLoc™ Backing System has an enhanced multi-layer component system that "locks" in durable turf fibers, extending the product's life cycle. Engineered using BioCel™ technology, the EnviroLoc™ Backing System replaces a large portion of petroleum-based polymers with bio-based polymers created from soybean plants (a rapidly renewable resource), then adds Celceram™ (a recycled product of coal combustion) for superior strength and dimensional stability. Together these biobased technologies provide an environmentally responsible approach to artificial grass that conserves Earth's natural resources and will look great for years to come.

For environmentally conscious builders and specifiers, SYNLawn offers water efficient landscaping products using recycled content, renewable materials and innovative design which can contribute points to LEED® (Leadership in Energy and Environmental Design) project certification.

Earth Friendly

- + 100% recyclable content
- + Reduces fuel consumption
- + Reduces carbon emissions

Water Friendly

- + Saves millions of gallons
- + Drains like natural grass
- + Reduces maintenance costs

Pet Friendly

- + Safe for pets of all sizes
- + Pets stay clean & healthy
- + Controls rodents & pests
